Tracking Sustainability through the Sustainable Development Goals (SDGs): Synergies and Trade-Offs

Message from the Guest Editors

The United Nations Resolution "The Future We Want". adopted by the General Assembly on 27 July 2012 (UN, 2012), defined sustainability as three interconnected pillars (the environmental, social and socioeconomic). There can, however, be no long-term sustainability in the absence of a balance and equilibrium between these three dimensions. The challenge lies in finding a blend of the three to engender an equilibrium that can last across time. The sustainabile development goals aim to achieve prosperity and wealth while also protetcting the planet. Again, the achievement of sustainable goals implies the definition of sustainable equilibria that may generate both synergies (for instance, social sustainability might necessitate improvements to the quality of education) and trade-offs (such as, for example, those between economic sustainability and climate action). In this context, it is important to conceptually define and empirically measure the synergies and trade-offs originated by the goals, in order to properly track sustainability and to enhance understanding and implementation.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario Institute of Technology, Oshawa, ON L1G OC5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
