

Special Issue

Energy Consumption: Prospects of Sustainable Economic Growth

Message from the Guest Editor

The relationship between energy consumption, economic growth, and sustainability is complex. Energy consumption drives economic growth but also contributes to environmental degradation. Achieving sustainability requires finding a balance between economic development and environmental protection through policies promoting energy efficiency and renewable energy. Scientific research into the relationship between energy consumption, economic growth, and sustainability is important because it provides insights and understanding into the interplay between these factors, which can inform policy and decision-making. This Special Issue aims to shed light on research which can provide a solid foundation for decision making, promoting sustainable development, and ensuring that energy consumption and economic growth are aligned with environmental protection and the goal of sustainability.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
