Special Issue

Unlocking the Sustainability Potential of the Water-Energy-Food Nexus Through Systems Thinking Approach

Message from the Guest Editors

The Water-Energy-Food (WEF) Nexus represents a complex, interrelated framework for addressing global sustainability challenges, including resource scarcity and climate change. This special issue highlights the importance of a systems thinking approach to understand and fully leverage these interdependencies. Resource scarcity, driven by climate change, population growth, and unsustainable practices, necessitates innovative solutions that optimize water, energy, and food resources. Multifunctionality is highlighted as a key principle, where resources are utilized for multiple purposes, enhancing overall efficiency and sustainability. For example, integrating agricultural practices with water management can improve crop yields while conserving water. Additionally, adopting nature-based solutions-such as restoring wetlands or implementing agroforestry—offers effective strategies for addressing these interconnected challenges. These solutions provide ecosystem services and enhance resilience against environmental stressors.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
