

## Special Issue

# Two-Dimensional Nanomaterials for Sustainable Environmental Applications

### Message from the Guest Editor

Given increasing industrialization, rising global populations, growing fuel demand, spiraling pollution, and global climate change, environmental challenges have garnered significant global attention in areas ranging from waste management to sustainable development. The development of effective and affordable materials for environmental remediation technologies is required to tackle complicated and interlinked environmental issues. Due to their high surface areas, tunable surface chemistry, and distinctive properties, 2D nanomaterials are highly important for environmental monitoring (e.g., chemical or bio-sensors), environmental remediation, and environmental energy. In this Special Issue, we highlight how 2D nanomaterials can play a significant role in addressing existing environmental problems.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1  
(Geography, Planning and Development)
