

Special Issue

Sustainable Biodiversity Monitoring and Wildlife Ecology

Message from the Guest Editor

Biodiversity encompasses the natural world around us, representing the vast array of organisms, plants, and animals that inhabit our planet. Without biodiversity, the intricate support system for both human and animal life would crumble. Monitoring programs focused on various plant and animal species are imperative.

At present, these monitoring initiatives can either be carried out by experts or coordinated by them while involving citizen scientists. We intend to endorse both professional and citizen science programs, contributing valuable information that aids in the comprehension of species population dynamics across natural, semi-natural, and anthropic habitats.

Our objective is to amass and promote monitoring programs worldwide, thereby developing additional data and tools for decision-makers to take action and formulate strategies for biodiversity conservation. This understanding holds significance for human well-being, supplying sustenance, medicines, and recreational opportunities, as well as ecological services like pollination, nutrient cycling, and soil formation.

Keywords

- Climate change
- Ecosystem services
- Protected areas
- Ecological modeling

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
