# A Study on Sustainable Geological Disaster Prevention and Control in Engineering

## Message from the Guest Editors

With the fast development of engineering technology and social economics, more engineering constructions are being built in mountainous areas and deep underground. Due to the special topography and geological environment, many potential geological disasters may occur. To understand the evolution mechanism of geological disasters and the mechanical characteristics of special rocks and soil, it is of significant importance to take correct and suitable engineering measures for geological disaster prevention and control. In this Special Issue, research areas may include (but not limited to) the following: Mechanism of surficial geological disasters; Mechanism of underground geological disasters; Engineering property of special rock and soil; Characteristics of geological disaster and prevention and control measurements; Prevention and control measurements by environmentally friendly materials and technologies; Restoration technology of geological disaster; Numerical simulation, theoretical models and other forms of analysis, calculation, and prediction of geological disasters; New monitoring technology for geological disasters.

# **About the Journal**

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Editor-in-Chief

#### Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario Institute of Technology, Oshawa, ON L1G OC5, Canada

### **Author Benefits**

### **Open Access:**

free for readers, with article processing charges (APC) paid by authors or their institutions.

### **High Visibility:**

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

### **Journal Rank:**

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
