

Special Issue

Sustainable Management of Aquatic Ecosystems

Message from the Guest Editors

The twenty-first century model of aquatic ecosystems management requires solutions capable to harmonize variable pressures, balancing them in the name of sustainable development of human activities while preserving natural conditions. So called 'nature-based solutions' provide this objective, whether they are aimed at protecting ecosystems from future pollution or restoring them to get rid of an unacceptable state of the ecosystem. The purpose of this Special Issue is to compile diverse solutions targeted at the sustainable lake management, following the idea of balance between ecosystem services and aquatic ecosystem health and biodiversity. The Special Issue welcomes papers focused on the solutions and innovations in lake management, with particular emphasis on technical, environmental and economic aspects. The papers must show originality and contribute to the scope of the Special Issue in a form of original research papers and short communications. Reviews highlighting up-to-date concepts along with critical comments are welcome as well. We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
