The Impact of Global Change on Biological Control of Pest in Agriculture

Message from the Guest Editors

Biological control as an environmentally sustainable means of reducing or mitigating pest organisms (arthropods, weeds and plant pathogens) through the action of their natural enemies can be an important component of integrated pest management and is of great economic importance to agriculture. Its application strategies can be carried out directly by man (importation and increment of natural enemies) or through indirect actions by management of existing interactions in the agroecosystem landscape (conservation of natural enemies or enhancement of their natural habitats). Currently the impact of global change on these strategies could alter their success and we should be prevented. Global changes encompasses: population, climate, economy, resource use, energy development, transport, land use and land cover, urbanization, atmospheric circulation, the carbon cycle, the nitrogen cycle, the water cycle, sea-level rise, food webs, biological diversity, pollution, and more. About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
