Special Issue

Biopolymers from Agri-Food Wastes: Prospects and Sustainability Challenges

Message from the Guest Editor

Finding sustainable practical solutions and potential applications for agri-food wastes is a much-desired focus of research in the present decade. Applying novel concepts and sustainable strategies for reduction of agri-food wastes coupled with maximal utilization for producing value-added compounds/products can not only support the economy, but also contribute towards reducing the stress on the environment. Understanding the basics of minimizing loss and wastage along the entire agri-food supply chain can benefit producers, consumers and dependent industries. However, designing appropriate sustainable value-added chains and business models remains a prerequisite to attain much-desired success. In this Special Issue, we invite original research articles, short communications and reviews that focus mainly on recognising present gaps, overcoming sustainability challenges and identifying future opportunities to produce biopolymers from agrifood wastes.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
