

Special Issue

Business Models for Sustainable Consumption in the Circular Economy

Message from the Guest Editors

Resource scarcity and climate change are key challenges for the future. To address them, it is necessary to “do more and better with less” (UN, 2017) and a radical change in agrifood business models is required. The main purpose of this Special Issue is to contribute to the existing literature in the field of sustainable consumption and new business models in the context of the circular economy transition to go towards a more sustainable society. Contributions promoting collective understanding of drivers and impact of sustainable consumption, innovative business models for a circular economy, reshaping of value chains, food waste and upcycled ingredients, coordination and collective action for a sustainable and fair food system, sustainable standards, public policy, and all aspects and issues in the ecological transition are welcome. Articles exploring the connections between sustainable consumption and business organization are particularly well-received.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
