Improving Sustainable Processes and Products through Biological Fermentation: Advances in Obtaining Agricultural Inputs to Food

Message from the Guest Editors

In contemporary society, sustainability has emerged as a global imperative, driving significant advances in agriculture and food production. Agricultural bioinputs, derived from natural and biodegradable sources, are transforming agricultural practices by reducing dependence on synthetic chemicals, thus promoting more environmentally friendly farming systems. Furthermore, foods obtained through fermentative processes are gaining prominence due to their nutritional and environmental advantages. These foods are produced with less water resource and energy consumption, in addition to contributing to the reduction in food waste. These innovations not only improve the population's quality of life by offering healthier and more sustainable food, but they also help to mitigate the environmental impacts of intensive agriculture. As we move forward, it is crucial to continue investing in practices and technologies that promote a harmonious balance between human needs and environmental preservation.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
