

Special Issue

Control Theory and Applications in Renewable Energy System

Message from the Guest Editors

Meeting environmental targets toward the reduction of national carbon dioxide emissions and dependency on fossil fuels substantially promotes energy generation from renewable energy resources. The increasing interest in the efficient and reliable integration of renewable distributed energy resources as well as recent advances in power electronics technologies require appropriate control systems that guarantee stability and various system performances. Therefore, it is clear that control theory is a key enabling technology for the deployment of renewable energy systems. This Special Issue aims to collect original research on innovative control techniques and applications for renewable energy systems including low-inertia power grids, smart grids, microgrids, wind turbines, grid-connected inverters, zero-emission ships, marine wave energy converters, electric vehicles, and related applications. Papers submitted to this Special Issue will be subject to a rigorous peer-review procedure, with the aim of rapid and wide dissemination of research contributions.

We look forward to receiving your outstanding research.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
