

## Special Issue

# Circular Economy Practices and Environmental Policies: A Strategic Move to Achieve Sustainable Development Goals

### Message from the Guest Editor

The idea behind the Circular Economy is to protect environmental sustainability and balance the social, economic, and environmental performance by combining different disciplines, including management, technology, economics, society, and environment-related areas. Undeniably, there are multiple connections between these scientific areas; Circular Economy is not only to achieve sustainability but to solve diverse environmental problems and overcome potential economic disturbances through technological innovation. This special issue aims to bridge the knowledge gap between industry and academia through sharing innovative ideas of Circular Economy, which can further promote sustainability agenda to reach sustainable development goals. This special issue collects rigorous research and case studies that examine and explore Circular Economy mechanisms, which can favorably shift polluted practices toward the sustainability agenda. We invite articles integrating a system perspective (i.e., environment, social, and economic interconnectedness) and addressing topics from conceptualization to execution phase of a Circular Economy at micro, meso, and macro levels.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
