

## Special Issue

# Considering Irreversibility in Transport Infrastructure Planning

### Message from the Guest Editors

Considering irreversibility implies a fundamental change of planning and decision support into the following directions:

- integrated systems assessment supplementing project assessment,
- target-based planning and decision support,
- new methodologies for integrating very long-term and irreversible environmental and climate impacts,
- consideration of social and regional equity,
- integration of innovative options for mobility and logistics and necessary conditions for their sustainable application,
- urban and regional planning with a clear preference for non-motorized transport and for avoiding an over-concentration of population,
- changing working locations and conditions for reducing commuting,
- integration of complementary infrastructures, like regenerative power supply, communication and control technologies, charging and fueling facilities.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
