

Special Issue

Sustainable Construction and Architecture

Message from the Guest Editor

The construction industry is widely regarded as destructive towards the natural environment and wasteful of finite resources. Many researchers and practitioners are seeking to improve industry performance and reduce its deleterious impacts. We value new research papers addressing potential solutions that will lead to a more sustainable construction industry. These may relate to operational energy usage, water efficiency, embodied energy, embodied carbon, waste minimisation, pollution reduction, indoor air quality, smart building monitors as well as reuse and recycling of building materials. Related topic areas will also be considered for this Special Issue. We are interested in the development of ideas and systems which will lift industry performance on a triple bottom line basis.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
