

Special Issue

Development of Green Economy: Dimensions, Strengths and Weaknesses

Message from the Guest Editors

We are pleased to announce the launch of a Special Issue entitled “Development of Green Economy: Dimensions, Strengths and Weaknesses”. In the last decade, the development of green economy has attracted the attention of scholars, policy-makers, civil society stakeholders, and representatives of the business environment from around the world, and the number of countries developing and implementing green economy strategies and policies is growing. The green economy concept offers the opportunities of a new economic growth paradigm that is friendly to the Earth’s ecosystems and can also contribute to poverty reduction. However it also entails risks and challenges, particularly for developing countries, for whom economic development becomes more demanding. The main objective of this Special Issue is to provide different dimensions of green economy development such as the advantages and risks that the development entails; the macroeconomic dimensions of green economic growth; the domestic strategies; the financial, technological, and trade issues of the countries in the process of transition to the green economy; and so on.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
