Special Issue

Challenges and Issues of the Smart Grid Technologies Implementation: Targeting Grid Resilience with Digitalization

Message from the Guest Editors

The aim of power system development is the transformation of conventional power systems, which are based on centralized power generation and automation for supervision and control, to decentralized and flexible systems with dispersed power generation and the expansion of automation at the power distribution level. In this way, both the production of electricity from distributed energy sources and its consumption at Medium-Voltage (MV) and High-Voltage (HV) levels can be managed efficiently.

The most important requirement for decarbonization process is a grid that is robust, resilient, reliable, and capable of withstanding internal effects from a continuously changing demand and supply patterns and bidirectional power flows as well as external effects from extreme weather events. The "digital grid", with digitalization at its core, grew with the emergence of OT and IT solutions and a growing knowledge of the effects on utility operations.

This Special Issue focuses on the analysis, design, and implementation of smart grid systems and to cutting-edge digital solutions for the transformation of electricity distribution networks.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
