

Special Issue

Socio-Economic and Institutional Factors Affecting Sustainable Implementation of the European Green Deal

Message from the Guest Editors

This Special Issue is dedicated to the socio-economic and institutional challenges encountered when implementing the European Green Deal strategy, particularly in EU member states. The European Commission aims to make Europe the first climate-neutral continent by 2050 and is dealing with the socio-economic consequences of this transformation. Climate neutrality can be considered a key lever in a broader strategy to modernize economic growth, but socio-economic and institutional challenges (such as the shadow economy) are significant barriers to implementing this strategy. The major purpose of the Special Issue is to investigate how socio-economic and institutional environment in EU countries impacts the implementation of the European Green Deal strategy and define recommendations to European governments to overcome socio-economic and institutional problems during implementation. Solving this problem will enable us to achieve sustainable development. This Special Issue will complement the theory of sustainability research, emphasizing the significance of socio-economic and institutional environment for the sustainable implementation of the European Green Deal.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
