

## Special Issue

# Economic Complexity and Sustainability

### Message from the Guest Editors

During the last decade, economic development efforts have been marked by both a return of industrial policy and the growing need to consider social and environmental sustainability. At the intersection of both of these topics, we find important policy efforts, such as Europe's Green Deal, and also a growing academic literature on economic complexity, green growth, green innovation, and sustainability. The purpose of this Special Issue is to stimulate, promote, and gather research at the intersection between environmental sustainability, social sustainability, and economic complexity. We are looking for contributions exploring these and other topics:

- Relatedness and the development of green products/jobs/industries;
- Sustainability and global value chains;
- Economic complexity, environmental sustainability, and the environmental Kuznets curve;
- Economic complexity, inequality, and sustainable human development;
- Green Growth;
- Green Innovation.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
