Energy Consumption Control and Environmental Pollution Treatment in Sustainability

Message from the Guest Editors

Recently, not only is energy consumption around the world increasing with the development of society, but global issues such as environmental pollution and ecological damage are also becoming more and more serious. For a long time, rapid economic development has been relatively dependent on energy consumption, but this violates the principle of sustainability and causes significant environmental degradation. Safe and reliable energy supply is the guarantee of sustainable development and social stability, and economical, clean and efficient energy utilization is the key to environmental protection and the improvement of human quality of life. Furthermore, excessive energy consumption and environmental damage are irreversible to a certain degree; hence, it is urgent to intervene in energy consumption control and environmental pollution treatment as soon as possible.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
