

Special Issue

The Energy-Environment Nexus for Sustainable Development: An Economic Perspective

Message from the Guest Editors

It is our great honor to announce a new Special Issue of *Sustainability* titled “The Energy–Environment Nexus for Sustainable Development: An Economic Perspective”. Environmental externalities, including air, water, and soil pollution, destruction of eco-systems, and climate change by human activity, have become a critical global issue. Environmental and energy economists have claimed that economic incentives such as pollution tax, subsidy, or tradable permits should be employed to correct the distortionary impact of such externalities and support green technologies. This Special Issue (SI) aims at providing theoretical as well as empirical research that evaluates and assesses various environmental policies that governments have instituted to remove or reduce environmental externalities. We solicit original research articles and reviews for this SI. Research areas may include (but not limited to) the following: Environmental economics and policy evaluation, energy and resource economics and policy assessment, and climate change mitigation/adaptation policies. I look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
