

Special Issue

Energy Management System and Multicriteria

Message from the Guest Editors

Most recent studies show that the main goal in energy management systems is to minimize the cost associated with electric energy consumption without considering the preferences/needs of end consumers. Therefore, it is possible to state that these works do not consider the actual difficulty of the problem. The HEMS, through the energy management controller, determines an optimized timeline for each appliance through optimization techniques related to, Artificial Intelligence, Business Analytics, and Business Intelligence, thus ensuring a more economic scenario for end consumers. This Special Issue aims to introduce a new thematic energy management system and multicriteria. Potential topics include but are not limited to the following:

- Innovations applied to information and communications technologies in-home energy management systems;
- New perspectives for the provision of the energy management system;
- Optimization tools for the elaboration of the energy management system;
- Optimization models for energy management system in smart cities and intelligent villages context;
- Optimization models for the energy management systems and the question of one-off instances of emergency.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
