Environmental Impact Assessment of Food Systems: From Farm to Fork and Beyond

Message from the Guest Editors

Food production and consumption is identified as one of the major drivers of environmental pressure, and a substantial contributor to global warming, water use, land use, eco-toxicity, and eutrophication. As food systems evolve, there is a need to imbibe sustainability aspects at every stage of the food value chain, from farm to fork and beyond. Life cycle assessment studies including carbon footprint and water footprint are becoming increasingly popular as they hold immense importance to identifying the hotspots of environmental pressures and prioritize mitigation strategies. This Special Issue aims to showcase articles on environmental assessments of food production, consumption and beyond, including but not limited to carbon footprint, water footprint of agri-livestock products such as crops, meat, dairy, processed food products, and so on. The issue covers different aspects of the food value chain such as agricultural practices, processing and packaging, retail and distribution, environmental labeling, consumer behaviour, waste management, and life cycle analysis.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
