

## Special Issue

# Environmental Education Researches

### Message from the Guest Editors

Dear Colleagues: Environmental education spans the fields of education, psychology, behavior, sociology, economics, and other social sciences, as well as biology, physics, chemistry, ecology, earth science, atmospheric science, mathematics, and geography. Some academics even think that all education should fall under the umbrella of environmental education. The content of this Special Issue will target the environmental behavior of individuals and community groups, helping them to understand and be aware of solutions to environmental problems they encounter in society. The primary goal is to provide empirical evidence of the ability to solve these problems through different social science and natural science approaches, define the scope of the problem and its restrictions, and propose solutions based on the needs.
