Special Issue

The Impact of Economic Complexity and Trading Complex Products on Environmental Indicators

Message from the Guest Editors

The economic structure of the country is a crucial indicator that impacts environmental degradation. The economic structure has been represented by economic complexity in the literature in recent years. The economic complexity index (ECI), which indicates the productive capabilities of countries, shows how complex and productive a country can be. According to complexity theory, every country has "capabilities". These "capabilities" consist of different parameters such as quality of human capital, skilled workforce level, the patent system, law, roads, railways, transportation system, etc. Diversified "capabilities" enable the manufacturing of more complex products. In terms of environmental degradation, higher economic complexity may have a negative or positive impact on the quality of the environment. This Special Issue will expand our knowledge of the relationship between the environment and different social and economic indicators (economic complexity, product complexity, sophistication, and concentration).

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
