Evidence-Based Design Promoting Human Well-Being in Urban Areas

Message from the Guest Editors

A large amount of the elderly living in cities today spent their childhood in rural areas, whereas children born and currently living in cities are likely to be future urban dwellers, raising concerns on their well-being. The majority of urban areas worldwide are faced with green spaces that are limited in number and size, as well as nature-based solutions. The limited planting and vegetation and the urban heat island effect have created “unhealthy” conditions for urban dwellers. Urban green spaces are essential for improving air quality, mitigating urban temperatures, encouraging physical activity, and improving overall human health and well-being. The design of sustainable urban green spaces can be facilitated through research. Understanding the interdependence between well-being and the environment is key for developing sustainable urban areas catering for human well-being, and evidence-based design can play a vital role in achieving this.

This Special Issue aims to provide a collection of papers based on scientific research in order to determine design proposals for urban green spaces that aim to support and promote sustainability and human well-being.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
