

## Special Issue

# Sustainable Management of Construction Projects

### Message from the Guest Editors

The importance of the architecture, engineering, construction and operation (AECO) industry to achieving sustainable infrastructure and development, especially in the phase of the current Industrial Revolution, cannot be overemphasized. There is therefore a need for discussion on the management of construction, developmental and infrastructural projects, not just for clients but for present and future generations of stakeholders that would be affected directly and indirectly by these projects. This Special Issue focuses on recent developments and emerging issues in the sustainable management of construction projects. In this Issue, we welcome innovative papers in sustainable development, infrastructure management, digital construction and innovative technologies. Potential topics include, but are not limited to, the following:

- Sustainable principles for construction projects;
- Management techniques for sustainable development;
- Construction in the fourth industrial revolution era;
- Innovative techniques for construction projects;
- Sustainable transport and urban management;
- Smart and sustainable city/building.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
