

Special Issue

Intelligent Remote Sensing and Sustainable Management of Landscape and Green Areas

Message from the Guest Editors

With the increase in earth-observing satellites, the volume of timely remote sensing data at large scales is rapidly growing. It is a challenge to mine the potential information in massive remote sensing data automatically and accurately. This Special Issue aims to collect the latest developments and applications of both basic and applied research on deep learning applied in remote sensing, with particular attention to the structure and performance of deep learning models suited to remote sensing data, and the mining of potential natural rules in remote sensing data. Research can focus on, but is not limited to, landscape- or green-areas-related image fusion, image registration, scene classification, object detection, LULC classification, image segmentation, object-based image analysis (OBIA), and so on. The application research of artificial intelligence methods such as machine learning/deep learning and remote sensing technologies such as optical remote sensing, LiDAR, UAV, and InSAR are particularly welcome. Original research articles and reviews are welcome.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
