# Sustainability of Farming in Future: Developing of Sustainable Intensification

# Message from the Guest Editor

The concept of sustainable intensification (SI) has been adopted by policy makers as a way to protecting biodiversity and the provision pf ecosystem services while meeting a growing demand for food in the world. We are interested in papers that develop novel SI indicators at local, regional, or national level; papers that provide insights into farmer attitudes towards SI, the role of the supply chain in influencing farmer decisions towards SI; papers that incorporate spatial variation regarding environmental impacts and risks associated with food production capability (for food production and opportunities for other ecosystem services) and environmental risks; papers that discuss as well as investigate the role of communication and knowledge exchange of innovations on achieving SI.

# **About the Journal**

# Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
