Financial Literacy and Rational Health Behavior: Implications for Sustainable Healthcare Provisions during the COVID-19 Pandemic and Beyond

Message from the Guest Editors

Rational health behavior can be observed as an investment in health capital that provides long-term benefits in the form of increased productivity. Financial literacy, which measures people's investment and money management capabilities, has been found to influence economic and social behavior such as savings, investment, wealth creation, retirement savings, and others. The current Special Issue, entitled "Financial literacy and rational health behavior: Implications for sustainable healthcare provisions during the COVID-19 pandemic and beyond", invites contributions from authors worldwide regarding any topic that advances our understanding of how financial literacy, as a rational decision-making instrument, influences health behavior. We particularly invite contributions regarding health behaviors during the COVID-19 pandemic. However, we will also consider other areas of health economics that have relevance to rational health decisions, impatience, impulsivity, hyperbolic discounting/delayed discounting, and others. We look forward to your contributions.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
