

Special Issue

Management of Freshwater Fisheries in the XXI Century: Perspectives, Approaches and Challenges within a Sustainability Framework

Message from the Guest Editors

This Special Issue aims to expand the concept of sustainable freshwater fisheries and increase its visibility by examining different aspects of this concept. Case studies, perspectives and innovative conceptual approaches are welcome to address the challenge of managing inland fisheries in a sustainable state while also exploring how the different dimensions and the socio-economic and environmental settings interact in the conservation of fisheries. Submitted articles may deal with several related relevant topics that may affect the sustainability of fisheries, including, but not limited to, the following:

- Infrastructure impacts on fisheries changes and performance;
- Governance processes and mechanisms oriented to support and manage transboundary fisheries;
- Influence of land use, water use, and water quality on fisheries;
- Modeling the responses of freshwater fisheries to climate changes and related ecosystem modifications;
- Tools, methods, and approaches for assessing the trends and sustainability of fisheries.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
