

Special Issue

Towards Sustainable Development Goals: Integrating Technology into Business and Tourism Education

Message from the Guest Editors

In light of the fact that the future of the planet rests in the hands of the next generation, it is imperative that technology be incorporated into business and tourism education in an effort to attain the Sustainable Development Goals. The implementation of technology has the potential to assist business and tourism industries in promoting social responsibility. Virtual reality (VR) technology, for instance, contributes to the creation of immersive, real-world experiences, enabling people in the business industry to interact with natural environments, thereby encouraging them to engage in energy conservation and recycling. Another example is the implementation of data analytics, such as the use of big data to identify the positive and negative impacts of both industries, thereby producing economically and environmentally sustainable business and tourism destinations. Topics of interest include, but are not limited to, the following:

- The adoption of AI in sustainable business and tourism education;
- Virtual reality (VR) technology for sustainable business and/or tourism education;
- Promoting pro-environmental behavior through technology-based education.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen
