Towards the Supply Chain Sustainability and Urban Sustainable Development: Risk, Assessment and Technological Advance in Digital Age

Message from the Guest Editors

Maintaining supply chain sustainability and urban sustainable development is one of the greatest challenges faced by economies worldwide. Recently, the global supply chain has faced unprecedented difficulties, resulting in a downward trend of the manufacturing industry, sharp fluctuation of total world trade volume, and an imbalance in the supply of international logistics services. These issues expose the vulnerability of the global supply chain. In order to adapt to the new environmental developments, the global supply chain should establish a new development model and embrace future technological advances, as well as the growing digital economy. Therefore, the relationship between supply chain sustainability and urban sustainable development, along with the related health, social and economic consequences of the digital economy and corresponding policies and measures, needs to be further identified in the perspective and process of global urbanization in order to explore sustainable development paths worldwide, which is of paramount importance for the development of mining towns, resources-based cities, and other resource-dependent regions.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
