Special Issue

Sustainable Geo-Resources for Tourism and Recreation

Message from the Guest Editors

Travelling and practicing recreational and leisure activities generally leads to the exploitation of and competition with geo-resources. The term "georesources" refers to all geological resources that are used by humankind; groundwater, mineral resources. energy production, underground space for construction and storage, and the surface geology and landscape. Most geo-resources are non-renewable resources. Thus, their relative sustainability is an important component of wider thinking about natural resource conservation and use. Travelers are heavy users of water and energy, while a great deal of land is occupied by hotels, restaurants and tourist activities. In an era of immense growth in tourism and recreation, the sustainable use of geo-resources is of vital importance. The Special Issue responds to the need for a critical review of the challenges of the sustainable utilization of geo-resources in tourism and recreation, as well as the sustainable management of the relationship between tourism and recreation and geo-resource exploitation in general. About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
