

# Special Issue

## Green IT and Sustainability

### Message from the Guest Editors

This issue aims to examine the importance and awareness of Green Information Technology (IT) and the significance of sustainability, as well as strategies and models related to it. These topics have become a buzzword among users, organisations, researchers and academics, with ICT usage and inappropriate recycling having started to harm Mother Nature, and the majority of the damage carried out by human beings; as a result, we need to confront this problem as soon as possible to allow the seventh generation to live in similar conditions as us, as we currently have no plan B for the planet. We can tackle this problem by introducing sustainability and meaning and awareness among the new generation and discussing the new green information technologies in general and examining the strategies and models which need to be adopted to minimize the effects of these problems through actions from both individuals and organizations. ## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
