

## Special Issue

# Advanced Research in Green Supply Chain Management

### Message from the Guest Editor

Challenges and opportunities for the green development of global supply chains coexist. On the one hand, the rapid development of supply chain digitization and informatization provides a new paradigm and path for green supply chain management. On the other hand, the trend of anti-globalization and trade protectionism has brought uncertainty to the greening of the global supply chain. This Special Issue aims to study how to promote the formation of a new green supply chain management model of cross-organization, cross-time and cross-space green cooperation, and to explore the impacts of actions taken by the government, enterprises, consumers and other subjects. Relevant areas include, but are not limited to, the following: Advanced theoretical framework of green supply chain management under the new situation; Inspiration of advanced technology to green supply chain management mode; Green collaborative innovation; Social impact of supply chain management and green supply chain management; Deep-level influencing factors of green supply chain management.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
