

## Special Issue

# Strategies for Advancing Sustainability in Food Systems

### Message from the Guest Editors

The transition toward sustainable food systems is a central challenge of the 21st century, requiring integrated strategies that balance productivity, environmental stewardship, social equity, and economic viability. As global food systems grapple with challenges such as climate change, resource inefficiency, food loss and waste, and inequitable access, there will be continue to be a pressing need for transformative approaches that promote resilience and circularity. This Special Issue aims to advance scholarly and practical understanding of how innovations in production, processing, distribution, and consumption can collectively promote sustainability across the food value chain. This Special Issue will build on the existing literature on sustainable agriculture, food system transformation, and the UN Sustainable Development Goals, offering a platform for novel insights and actionable solutions that bridge research, practice, and policy across disciplines and scales, from local initiatives to global governance.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
