Special Issue

Sustainable Fisheries Management and Ecological Protection

Message from the Guest Editors

The protection of fish stocks requires balanced management and sustainable administration of fishing activities in which the fish resource is the main element, given that these activities have a social and economic character based on the stability of ownership of assets that contribute to the sector's development. Sustainable fishing practices, which include regulating fishing quotas, protecting breeding periods, and monitoring fish stocks, are essential for the long-term maintenance of aquatic resources. The functional elements of an ecosystem, be they species, processes, or structures, play crucial roles in maintaining its health and balance.

This Special Issue will present the state of the art on Sustainable Fisheries Management and Ecological Protection. In this regard, the contributions of scientific research remedy certain issues from the failure to adopt certain measures or from the adoption of inadequate measures, with serious consequences for the future of living aquatic resources, such as the extinction of species, the depletion of stocks to the limit of biological self-sufficiency, and the end of fisheries, all of which have serious socio-economic consequences.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
