

Special Issue

Ecological Footprint and Its Components: Towards a Sustainable World

Message from the Guest Editor

Environmental degradation has drawn the attention of the academic community, policy-makers, and the general public, especially since the United Nations Conference on the Human Environment held in 1972. Although climate change and global warming have been among the threatening examples of the effect of human activities on the environment, water, air, and soil pollution also comprise problems of environmental concern. To effectively identify environmental problems, both appropriate indicators and robust tools should be used.

In this Special Issue, I invite papers that mainly focus on the dynamics of ecological footprint and also its components, such as the co-movement of the footprint with various variables, using recently introduced advanced techniques. In this sense, in this Special Issue, the possible topics of interest include but are not limited to: the Environmental Kuznets Curve, Pollution Haven Hypothesis, the persistence of shocks on the indicators, and convergence of the environmental indicators, etc. Contributions may include empirical research, case studies, and comparative and theoretical studies.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
