Achieving Sustainability Goals Through Artificial Intelligence

Message from the Guest Editors

Artificial intelligence (AI), as well as other fields, has been a major catalyst for the transformations seen in recent decades, especially in the last few years. Undeniably, it is a primary driver of economic growth. AI significantly impacts resource consumption, community life, the labor market, decision-making processes, and more, enabling individuals to lead more comfortable and prosperous lives. While numerous studies have explored the evolution and achievements of AI, its role in ensuring sustainability has been relatively underexplored. This Special Issue aims to present how AI, currently undergoing rapid growth, can contribute to achieving sustainability goals. It provides significant insights for academics, practitioners, and researchers. Moreover, this collection of articles seeks to foster a deeper understanding of the role that individuals and organizations play in supporting sustainable development by integrating AI's capabilities judiciously while adhering to ethical principles.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
