Innovations towards Greener and Smarter Mobility for Sustainable Development

Message from the Guest Editors

Reducing pollutant emissions from urban, suburban, and long-distance mobility is one of the goals for creating fully sustainable economies and perspectives for a future safe commonwealth. Clean and smart mobility has become an important factor for societies to flourish economically and socially, with a high quality of life when considering the environment. The transition towards greener and smarter mobility is built on a few key assumptions. The first is wise adaption of the existing infrastructure to new mobility needs in the context of the increase in wealth and the image of completely accessible world that is consolidated in the consciousness of modern societies. The second is the low- and zero-emission transport systems when considering not only the emission from vehicles but also the total carbon footprint. Third is the safety of people and the environment. Fourth is the multimodality of transport extended to synchromodal transport solutions. Fifth is new business models and services for transport. The last is reliable information embracing all previous assumptions, not only for regular planning but also for crisis and risk engineering.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
