

## Special Issue

# Trends in Supply Chain Operations Management for Sustainable Development

### Message from the Guest Editors

Sustainable supply chain operations management (SCOM) has gained increasing relevance balancing economic performance with environmental and social responsibility in organizations. Organizations are facing increasing pressure from regulators, consumers, and stakeholders to adopt more sustainable practices leading to the emergence of new key trends. This Special Issue aims to seek out high-quality articles from industry-related scholars and researchers in the areas of supply chain and operations management that offer insights on sustainable development. We are interested in publishing articles that address the new trends in SCOM, namely circular economy, green logistics, digital transformation, risk awareness, and resilience. The application of best practices in business or new business models are welcome and should be shown, discussed, and analyzed. Potential topics include, but are not limited to, logistics, operations, distribution, production, transportation, digitalization, regulatory compliance, and circular economy.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
