# Sustainable Development of the Digital Economy and Digital Innovation in the Web2.0 Environment

### Message from the Guest Editor

With the global trend towards a digital economy, digital technology has become an important driving force for economic development, and the digital economy has gradually become an important pillar of the global economy. However, in the Web2.0 environment, due to the existence of centralized platform monopolization, the development of a digital economy and digital innovation has encountered resistance. Therefore, Web2.0 should be further developed to achieve the "decentralization" needed for the development of a digital economy; to transform the existing "platform economy" into a "sharing economy"; to improve the driving force of the digital economy with big data, Internet of Things, blockchain and other technologies; and to promote the sustainable development of digital innovation. Keywords such as "green", "circular" and "sustainable" have become central to innovation and development. Therefore, in the Web2.0 environment, methods of developing a healthy digital economy at high speed and sustainably promoting digital innovation will be the core issues discussed in this Special Issue.

## **About the Journal**

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

#### Editor-in-Chief
