

Special Issue

Sustainable Logistics and Supply Chain Operations: Risks, Rebuck, and Resilience

Message from the Guest Editors

This Special Issue will focus on the risks, challenges, and vulnerabilities associated with logistics and supply chain resilience. Additionally, it will present leadership strategies for enhancing resilience in logistics and supply chain management, thereby ensuring continuity of operations. In the 21st century, nations are struggling with fragmented supply chains amid growing unpredictability in meeting their national needs. This century has introduced significant challenges, including the COVID-19 pandemic, followed by a wave of political upheaval that has disrupted decades of meticulously established logistics and supply chains. Adding to these challenges, the competitive trade landscape in 2025 features trade barriers and new regulations that demand strict compliance in logistics and supply chains. This situation has revealed vulnerabilities and highlights the fragility of the world's interconnected logistics systems. Addressing these issues has become a top priority for leaders worldwide.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
