Special Issue

Sustainable Urban Development Prospective for Smart Cities

Message from the Guest Editors

The concept of a smart city includes many different components, starting with critical infrastructure and ending with the use of artificial intelligence in making important decisions for the city. I believe that the future of cities will increasingly contribute to smart urban development, in which the smart community will receive personalized public services: innovative access to service provisions will allow for the modernization of education, health care, public administration, and local transport functionality and will encourage the participation of residents in digital transformation processes. This Special Issue collects high-quality papers in the fields of smart city and sustainable development, including but not limited to sustainable urban development. Aiming to achieve sustainable development, we encourage potential authors to submit high-level scientific manuscripts analyzing smart city policies, smart city success stories, the impact of technology on smart urban development, the use of artificial intelligence in the context of a smart city, smart public service provision, citizen involvement, and others.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
