

Special Issue

Integrating GIS and Remote Sensing for Sustainable Water Management in a Changing Climate

Message from the Guest Editors

The integration of Geographic Information Systems (GISs) with remote-sensing technologies for sustainable water management has been revolutionized under the pressures of climate change. This Special Issue aims to explore cutting-edge research and practical applications related to these technologies and their ability to address the multifaceted challenges associated with water management. It will focus on interdisciplinary studies that implement GIS and remote sensing tools for the effective and sustainable management of water resources. The research included in this Special Issue will focus on hydrological modeling, watershed management, drought and flood monitoring, and the assessment of water quality and availability, among other areas. This Special Issue will provide a platform for the sharing of methodologies, innovative case studies, and evaluations of policies that demonstrate how these technologies could enhance water sustainability.

- GIS
- remote sensing
- sustainable water management
- climate change
- hydrological modeling
- watershed management
- drought monitoring
- flood monitoring
- water quality assessment
- water availability

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
