

Special Issue

Recent Advances in Plant and Microbial Technique for Emerging Contaminants Removal

Message from the Guest Editors

Emerging contaminants is term used by water quality and professional to identify any natural or synthetic chemical or microorganism with possibly notable or suspected harmful ecological and human health effects that are not specifically regulated or monitored in the environment. The main component of emerging contaminants include pesticide, endocrine-disrupting chemicals, personal care products, pharmaceuticals, flame retardants, and industrial additives. This special issue will be intended for academia, environmental managers and process engineers. Some subject matter is covered in survey or overview form, whereas others are treated in more depth. The overall objective of this special issue is not simply to provide a general reference, but to serve as a resource for developing approaches to remediate emerging contaminants. Moreover, the future challenges and prospects of ECs degradation by means of multiple multifunctional treatments will be outlined accordingly.

- enzyme mechanism
- microbial degradation
- ligninolytic enzyme
- biotransformation
- phytoremediation

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
