

Special Issue

Environmental Impact Assessment for Sustainable Wood Industry

Message from the Guest Editors

The scope of the Special Issue includes the assessment of the environmental impact of the wood industry via procedural tools such as environmental impact assessment, multi-criteria decision analysis and risk management; analytical tools such as LCA, environmental risk assessment, material flow analysis; and aggregated tools such as carbon footprint. We encourage studies encompassing several life stages, studies focusing on the carbon mitigation effects of wood, the substitution of carbon-intensive materials, or similar. We also welcome contributions related to economic sustainability, for example, life cycle costing; the circularity of wood products; studies of cascade use and/or innovative materials; and analyses of social sustainability including health, wellbeing, comfort and productivity. We welcome systematic reviews, meta-analyses, conceptual papers, experimental studies, empirical cases, online surveys, and intervention studies, which will fill existing gaps in knowledge about the sustainability of wood industries. If you are uncertain about whether your paper fits within the scope of this Special Issue, please contact the .

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
