Sustainable Development of Occupational Health and Wellbeing: Theory, Application and Practice

Message from the Guest Editors

The sustainability of occupational health and wellness is a growing concern among various organizations and industrial sectors. Specifically, as the COVID-19 pandemic has highlighted, the concern with occupational health and wellbeing is that it no longer emphasizes physical health/wellbeing in the workplace, but rather cognitive health and overall worker wellbeing, both inside and outside the workplace. To exchange information and ideas about occupational health and wellbeing, articles may address a variety of research areas, such as risk perception, workplace safety and health, health/safety culture/climate, work performance, underserved subgroups, healthy and productive aging, organizational safety, human–systems interfaces, physical and virtual work environments, and workers' wellbeing and wellness. Submissions on newly emerging/contemporary research areas and practices in regard to physical and cognitive health and wellbeing, human/ergonomic risk factors assessment and controls/management, in different occupational or community settings and/or industry-specific occupational health, wellness, ergonomics, and safety issues, etc., are also welcome.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
