Land Use/Cover Drivers and Impacts: New Trends and Experiences from Asia

Message from the Guest Editor

After decades of rapid socio-economic development, many Asian countries are in an era characterized by major socio-economic and political change. Modern trends are steadily causing significant land use/cover changes. Land over-use and under-use, among others, are novel phenomena that deserve more attention and deliberate scrutiny. Studies of these new trends may assist academic and public policy communities with forecasting future land use/cover change in Asian countries, as well as with addressing related issues. This Special Issue of *Sustainability* will be comprised of papers that reveal novel empirical land use/cover related experiences from Asia. You are being invited to participate by submitting your relevant work for consideration. Interdisciplinary approaches are highly welcome.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
